21-Hydroxylase Antibodies

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
21-Hydroxylase Antibodies [01]	Negative			

Reference Interval: Negative

This result is a qualitative determination of autoantibodies to 21-Hydroxylase (21-OH Abs) in patient serum. 21-OH Abs occur in autoimmune Addison's disease, whether isolated or part of type I or type II autoimmune polyglandular syndrome. This result should be used in conjunction with other clinical and laboratory findings and is not a substitute for functional testing required to diagnose adrenal insufficiency.

Disclaimer
The Previous Result is listed for the most recent test performed by Labcorp in the past 5 years where there is sufficient patient demographic data to match the result to the patient. Results from certain tests are excluded from the Previous Result display.
