Test Name	In Range	Out Of Range	Reference Range	Lab
ADENOVIRUS ANTIBODY, SERUM	<1:8		<1:8	

INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected
 > or = 1:8 Antibody Detected

Single titers of > or = 1:64 are indicative of recent or current infection. Titers of 1:8 - 1:32 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Nichols Institute, Chantilly, VA. It has not been cleared or approved by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
