

Patient Information	Specimen Information	Client Information
<b>DOB:    AGE:</b> Gender: Phone: Patient ID: Health ID:	Specimen: Requisition: Lab Ref #: Collected: Received: Reported:	

Test Name	In Range	Out Of Range	Reference Range	Lab
HEPATITIS D ANTIBODY, TOTAL HEPATITIS D ANTIBODY, TOTAL REFERENCE RANGE:    NEGATIVE	NEGATIVE			

INTERPRETIVE CRITERIA:

NEGATIVE: Antibody not detected  
 POSITIVE: Antibody detected

HDV infection occurs only in association with HBV infection. Detection of HDV total antibody may indicate acute infection, chronic infection, or past infection with recovery. Measurement of HDV IgM may help distinguish among these three infection categories; however, because HDV IgM may persist in chronic infection, HDV RNA PCR testing can also be considered as an aid in the diagnosis and staging of infection. This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Infectious Disease. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
