Ordered Items: HSV-2 Ab, IgG

Date Collected: 08/14/2023

HSV-2 Ab, IgG

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
HSV 2 IgG, Type Spec ⁰¹	<0.91		index	0.00-0.90
		Negative	<0.91	
		Equivocal	0.91 - 1.09	
		Positive	>1.09	
HSV-2 Antibody Interpretation: Negative indicates no detectable antibodies to HSV-2 were found. If recent exposure is suspected, retest in 4-6 weeks. Equivocal samples should be retested in 4-6 weeks. Positive indicates the presence of detectable IgG antibody to HSV-2. False positive results may occur. Repeat testing, or testing by a different method, may be indicated in some settings (e.g. patients with low likelihood of HSV infection). If clinically appropriate, retest 4-6 weeks later.				

Disclaimer
The Previous Result is listed for the most recent test performed by Labcorp in the past 5 years where there is sufficient patient demographic data to match the result to the patient. Results from certain tests are excluded from the Previous Result display.
