Inflammatory Bowel Disease-IBD

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
Saccharomyces cerevisiae, IgG ⁰¹	<20.0	Negative Equivocal Positive	Units <20.0 20.1 - 24.9 >or= 25.0	0.0-24.9
Saccharomyces cerevisiae, IgA ⁰¹	<20.0	Negative Equivocal Positive	Units <20.0 20.1 - 24.9 >or= 25.0	0.0-24.9
IgA and IgG antibody testing for S. cerevisiae is useful adjunct testing for differentiating Crohn's disease and ulcerative colitis. Close to 80% of Crohn's disease patients are positive for either IgA or IgG. In ulcerative colitis, less than 15% are positive for IgG and less than 2% are positive for IgA. Fewer than 5% are positive for either IgG or IgA antibody, and no healthy controls had antibody for both.				
Atypical pANCA ⁰¹	<1:20	The atypical pANCA pattern has been observed in a significant percentage of patients with ulcerative colitis, primary sclerosing cholangitis and autoimmune hepatitis. ASCA+/PANCA- Suggestive of Crohn's disease ASCA-/PANCA+ Suggestive of Ulcerative colitis	titer	Neg:<1:20

Disclaimer
The Previous Result is listed for the most recent test performed by Labcorp in the past 5 years where there is sufficient patient demographic data to match the result to the patient. Results from certain tests are excluded from the Previous Result display.
