 FASTING:

Test Name	In Range	Out Of Range	Reference Range	Lab
INFLUENZA TYPE A AND B ANTIBODIES, SERUM				
INFLUENZA TYPE A ANTIBODY SERUM	<1:8		titer	
INFLUENZA TYPE B ANTIBODY SERUM	<1:8			

REFERENCE RANGE: <1:8

INTERPRETIVE CRITERIA:
 <1:8 Antibody Not Detected
 > or = 1:8 Antibody Detected

Single titers of > or = 1:64 are indicative of recent infection. Titers of 1:8 to 1:32 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Infectious Disease. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
