**Lactose Tolerance Test**

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
Glucose 1 <sup>01</sup>	75		mg/dL	
Glucose 2 <sup>01</sup>	98		mg/dL	
Glucose 3 <sup>01</sup>	85		mg/dL	
Glucose 4 <sup>01</sup>	83		mg/dL	
Glucose 5 <sup>01</sup>	68		mg/dL	
Comment: <sup>01</sup>				

An increase in plasma glucose greater than 30 mg/dL is normal. Those with lactase deficiency will demonstrate bloating, cramps, and diarrhea, and will show a glucose increase of less than 20 mg/dL. False positive results may occur because of lack of the increase of blood glucose concentration attributable to normal insulin response to the carbohydrate load.

**Disclaimer**  
The Previous Result is listed for the most recent test performed by Labcorp in the past 3 years where there is sufficient patient demographic data to match the result to the patient.
