LYME DISEASE (BORRELIA SPP) DNA, QL, BLOOD

REFERENCE RANGE: NOT DETECTED

The diagnostic value of a negative Borrelia species PCR result from whole blood has not been established. A negative result does not exclude Borrelia infection because the concentration of the organism in blood tends to be low or non-existent in patients with Lyme disease.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Infectious Disease. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
