**Reference Range/Comments**

Analyte Name	In Range	Out Range	Reference Range	Lab
OxLDL	<b>32</b>		<60 U/L	Z4M
Based on a recent study of an 'apparently healthy' and non-metabolic syndrome population(1), the following cut-offs have been defined for OxLDL. A cut-off of <60 U/L defines a population with a low relative risk of developing metabolic syndrome, a range of 60 to 69 U/L defines a population with a moderate relative risk (2.8 fold) and >=70 U/L defines a population with a high relative risk (3,5-fold). (Reference: 1-Holvoet et al. JAMA. 2008; 299: 2287-2293.)
