**COMMENTS:**      FASTING:NO

Test Name	In Range	Out Of Range	Reference Range	Lab
PROTEIN C ACTIVITY AND ANTIGEN PROTEIN C, ACTIVITY	83		70-180 % normal	EZ
Decreased levels of protein C activity may be found in hereditary deficiency, treatment with oral anticoagulants, liver disease, D.I.C. and post surgery. An elevated protein C activity is not clinically significant. Only deficiencies are associated with an increased thrombotic risk. However, anti-thrombin or oral anti-Xa medications may cause false elevations.				
PROTEIN C, ANTIGEN	98		70-140 % normal	EZ
Decreased levels of Protein C antigen may be found in congenital deficiency, treatment with oral anticoagulants, liver disease, D.I.C. and post surgery.
