Test Name	In Range	Out Of Range	Reference Range	Lab
SCHISTOSOMA (IGG) AB, FMI	<1.00			TXC
REFERENCE RANGE: <1.00				

INTERPRETIVE CRITERIA:  
 <1.00 Antibody Not Detected  
 > or = 1.00 Antibody Detected

This assay utilizes the microsomal fraction of adult *S. mansoni* worms (MAMA) as antigen, and is thus highly specific (99%) and sensitive (96%) for detection of infection caused by *S. mansoni*. Although the assay is also highly specific for infections caused by other *Schistosoma* species (*S. japonicum*, *S. haematobium*, *S. mekongi*), its sensitivity for these infections is lower (55%). Antibody levels do not correlate with intensity of infection.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
