Test Name In Range Out Of Range Reference Range Lab SYPHILIS ANTIBODY AMD

CASCADING REFLEX

T. PALLIDUM AB Negative Negative

No antibodies to T. pallidum (the agent causing syphilis) were detected in the specimen. This result, however, does not exclude very recent T. pallidum infection; testing of a second specimen, collected 2-4 weeks after this specimen, is recommended if the index of suspicion for recent infection is high.

HSV 2 IGG, W/REFL
HSV 2 INHIBITION

HSV 2 IGG, TYPE SPECIFIC

>1.09

This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If recent HSV infection is suspected but the results are negative or equivocal, the assay should be repeated in 4-6 weeks. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.

CHLAMYDIA TRACHOMATIS

## Infectious Diseases

Test Name	Result	Reference Range	Lab
HIV 1/2 ANTIGEN/ANTIBODY, FOURTH GENERATION W/RFL			TP
HIV AG/AB, 4TH GEN	NON-REACTIVE	NON-REACTIVE	

HIV-1 antigen and HIV-1/HIV-2 antibodies were not detected. There is no laboratory evidence of HIV infection.

PLEASE NOTE: This information has been disclosed to you from records whose confidentiality may be protected by state law. If your state requires such protection, then the state law prohibits you from making any further disclosure of the information without the specific written consent of the person to whom it pertains, or as otherwise permitted by law. A general authorization for the release of medical or other information is NOT sufficient for this purpose.
